About Global Assistance

As an international leader in energy-efficient technology to enhance the durability (historic) buildings, Global Assistance has developed a unique moisture control system called DryTronic. It is a versatile technology that can be employed on commercial, industrial, and residential properties, and it helps to permanently reduce energy costs.

Furthermore, Global Assistance maintains exceptionally high standards of their products, work quality, health, and safety, as well as environmental protection to the complete satisfaction of its client.

Products & Services

Global Assistance focuses on its energy efficient DryTronic technology, an Electrochemical Moisture Control System (EMC), that can permanently cope with multiple humidity sources, by (preventatively) drying buildings and structures. The technology also serves as a desalinator and is applicable in walls, basements, and any other building space with moisture issues. The system automatically switches to a passive mode after DryTronic has dried the building, maintaining optimal levels of dryness and lowering energy costs. The service offered by Global Assistance goes beyond technology, offering planning, personal assistance, installation, lectures, workshops, and trainings.

Key Advantages

- Simple installation process which does not require wall excavation
- Dried walls reduce energy consumption/costs in the long term
- Applicable with any kind of building material
- Reduced drying time (4-8 weeks) compared to conventional drying methods
- Chemical and maintenance free technology
- Energy efficient and cost saving drying process compared to conventional drying methods (typically 50-80% more energy efficient)
- Desalination and moisture barrier

Partnership Opportunities

Global Assistance aims to form sustainable business partnerships to further increase the durability of American homes and buildings by implementing their unique DryTronic technology. Finding the right distribution partners, such as real estate owners, property managers, and multipliers is their strategic key to long term success.
